Collapsing in Specimen Creek

Specimen Creek Southern Gallatin 2/9/2019 Code SS Notes

From e-mail: "Large collapses on any slope with HS of <1m, one pit at 7500 on W <u>aspect</u> and 19 degrees HS 100 cm, yielded ECTP22 sudden <u>collapse</u> on advanced <u>depth hoar</u> 45cm from the ground. Overall just terrible structure. We had collapsing on both E and W aspects. Large shooting cracks. No other avalanche activity apart from large slide on Ernest Miller from several days ago."

Number of slides 1 Number caught 0 Number buried 0 Avalanche Type Soft slab avalanche Slab Thickness units centimeters Single / Multiple / Red Flag Single Avalanche Advisory Year <u>18-19</u>
