

Natural and skier triggered slides in Hyalite

Divide Peak

Northern Gallatin

3/26/2020

Code

SS

Latitude

45.40290

Longitude

-110.97600

Notes

From obs: "Later in the day we ran across what we assume to be a remotely triggered avalanche from another party in the area. There were two sets of tracks on the adjacent slope with cracks visible on the slope. The avalanche occurred on a 40° east [aspect](#) at 9250' and failed on the MFcr/FC dn 35cm. Skiing out the trail with better light than in the morning, we saw a number of similar avalanches confined to east aspects on steep 40°+ rolls and presumably failing on the persistent grains above the crust."

Number of slides

3

Number caught

0

Number buried

0

Avalanche Type

Soft slab avalanche
