Couple large collapses in Hyalite Creek

Hyalite - main fork Northern Gallatin 1/10/2021 Code Latitude 45.44720 Longitude -110.96200 Notes

From obs: "While ski touring in the Hyalite Creek Drainage today, my ski partner and I both, at separate times of the day, remote triggered sudden collapses. Each time, we felt the snow <u>collapse</u> underneath our feet, and then heard and felt a deep "whumph". The noise came from the North of us both times, where the slope was slightly steeper (still below about 28 degrees-- not colored with "slope angle shading" layer on caltopo.)."
