

Bottom of the Ramp, Bridgers

Date

Sat, 12/11/2021 - 12:21

Activity

Skiing

Very windy down low, appeared to be nuking on the ridge. Winds were out of the East (upslope) as I skinned up Bridger. There was a significant amount of debris below Peters Point, couldn't see a crown, could have been pushed by a skier but no obvious ski tracks although there were tracks everywhere; people were even skinning up adjacent to the debris, Wasatch style. The light was too flat for a decent photo of Peters. I dug a full profile at the bottom of the ramp:

<https://snowpilot.org/node/35573>

I would say the snowpack generally lacks good structure but is not unstable for now in non wind loaded terrain due to the lack of a cohesive slab.

Region

Bridger Range

Location (from list)

Bridger Bowl

Observer Name

Andrew Newman
