## **Unstable snow in Fingers Meadow**

Date Tue, 12/12/2023 - 09:40 Activity Skiing

Skinned up the closed ski area to the Fingers Meadow above the Pierres Knob chairlift. Got a substantial <u>collapse</u> (whumpf) while skinning and stopped to dig a pit at that location. E <u>aspect</u>, 8100 ft. Snowpack consisted of 6-8" of old, weak, <u>faceted snow</u> at the ground capped by ~18" of snow that has fallen over the last week.

ECT broke on the old snow while isolating the column. Twice (ECTPV x 2). Clear signs of instability kept us out of avalanche terrain.

Region Bridger Range Location (from list) Bridger Bowl Observer Name Ian Hoyer
