

Slab avalanche near Chico peak

Date

Sun, 04/14/2024 - 06:10

Activity

Skiing

Saw a slab avalanche on a NE face at around 9000-10000 feet. Did not see any signs of instability on the tour, but there was not a very concrete freeze. Everything below 8000 remained unfrozen.

Region

Out of Advisory Area

Location (from list)

Emigrant Peak

Observer Name
